PROJECT ON

ANDROID APP DEVELOPMENT

1.Registration Page

1 Here We Provide Two method For New Users-

a) Register Via Otp(Phone)

b) Register Via Email

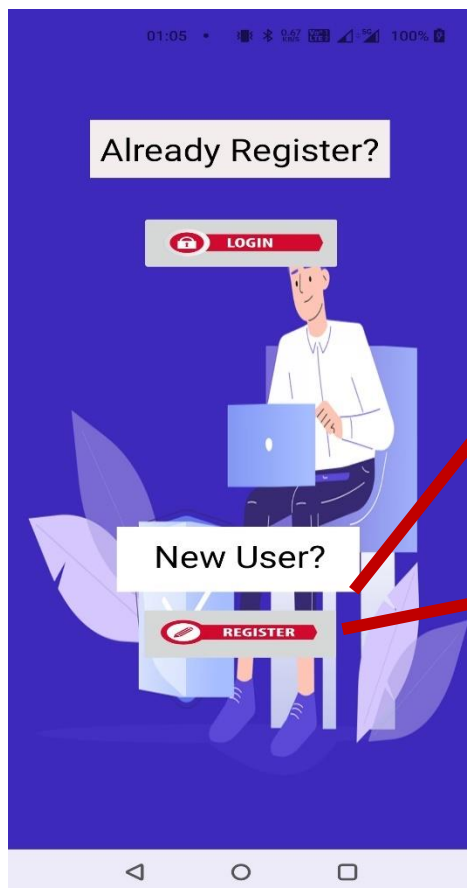

Fig-a

Fig-b

- For a New User Click For Register
- A Following Page Will be Open including Register With Email And Register With Otp
- Choose Your Preference And Register.

Fig b- XML Code For New User(ie-Register With Otp And Gmail)

```

3.Login With OTP

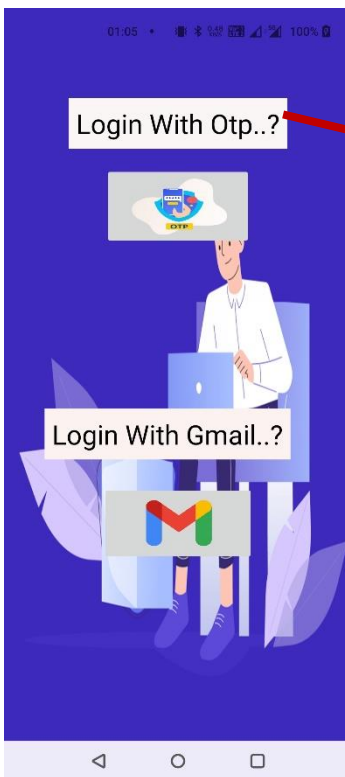

Fig-e

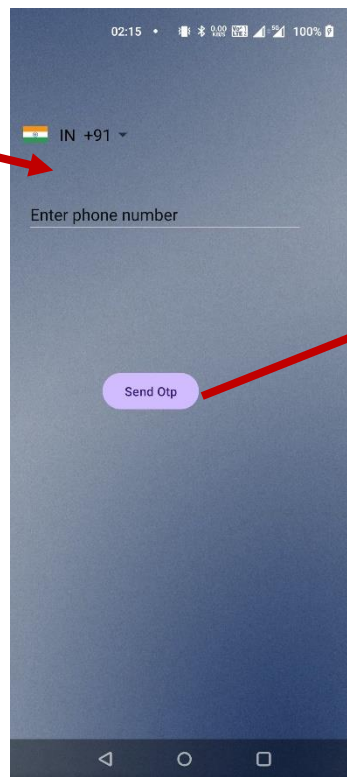

Fig-f

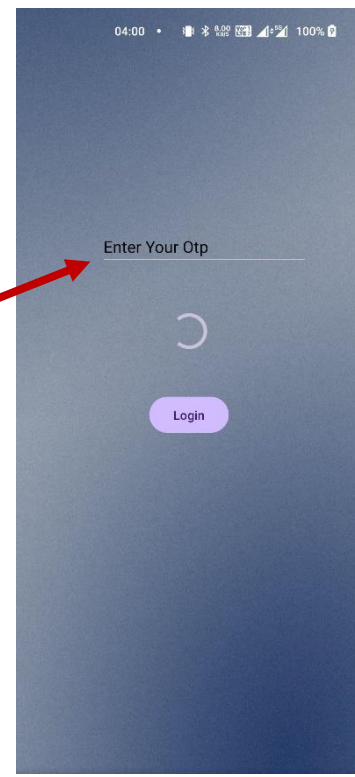

Fig-g

- Login With OTP is one of the best features
- Secure login system using OTP.
- This helps for enhance security of user authentication

2 Working Of Login

1. User enters their phone number.
2. The system sends an OTP to the entered phone number.
3. User inputs the received OTP.
4. The system verifies the OTP.
5. Upon successful verification, the user is logged in.

4. Welcome Screen

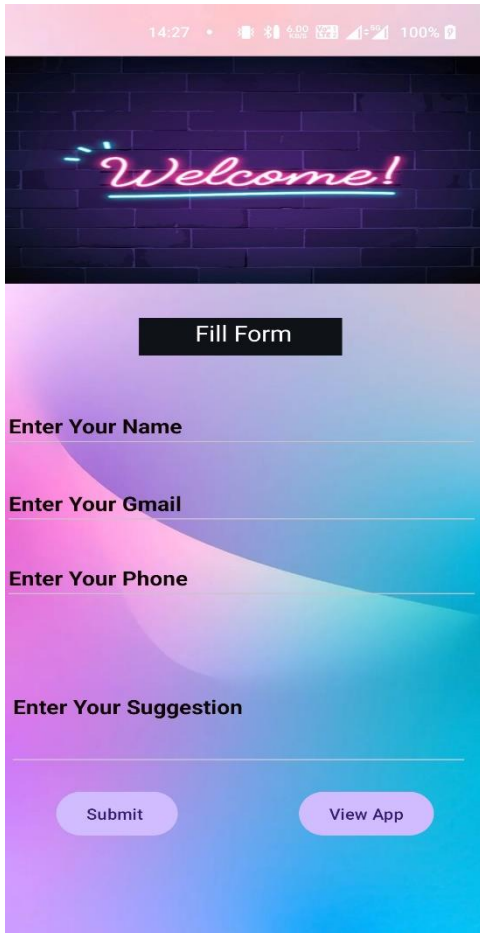

Fig h

- In mobile applications, user registration is a crucial feature that allows users to create an account to access personalized services.
- Backend integration for storing user data and validation mechanisms to ensure data accuracy.

- **Diagram Working**

- 1) Open the registration form
- 2) Enters their details (name, email, password, Phone).
- 3) system validates the input
- 4) Upon successful validation, the data is sent to the backend server.

- 5) The server stores the data in the database.
- 6) user is notified of successful registration of form
- 7) After that user redirect in the application

5.Home Screen

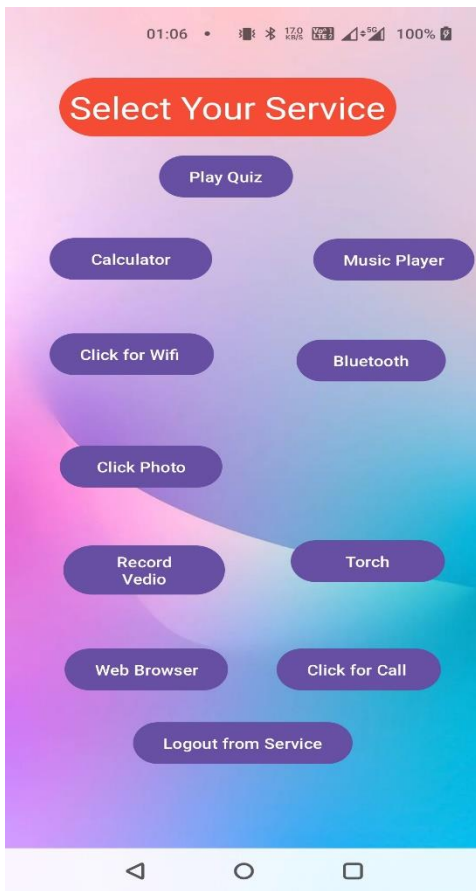

Fig i

Project Report: Android Home Activity with Multiple Functionalities

1. Introduction:

This project demonstrates a basic Android application featuring a home screen that provides access to various functionalities such as Bluetooth, WiFi, Torch, Camera, Video Player, Calculator, Call, and Quiz. The home screen contains buttons for each functionality, which navigate the user to the respective activity when clicked.

2. Project Setup Technologies Used:

- Programming Language: Java
- IDE: Android Studio
- UI Components: Material Design Components

Explanation:

- LinearLayout: The root view that aligns its children vertically.
- Button: Each button corresponds to a different functionality (e.g., Bluetooth, WiFi, Torch, Camera, etc.) and has properties like width, height, text, margin, and background color.

3. Conclusion

This project demonstrates the creation of a home activity in an Android application that provides access to various functionalities through buttons. Each button click navigates to a specific activity, showcasing modularity and separation of concerns. The app utilizes edge-to-edge display for a modern look and feel.

6. Bluetooth

Project Report: Android WiFi Management Activity

1. Introduction:

This project demonstrates a basic Android application featuring a WiFi management activity. It includes functionalities to enable and disable WiFi, as well as navigate to another activity. The activity features buttons to trigger these actions and provides user feedback using Toast messages

Project Setup Technologies Used:

- Programming Language: Java
- IDE: Android Studio
- UI Components: Material Design Components

Fig j

Explanation:

- Initialization: The onCreate method sets up the activity, initializes UI components, and assigns click listeners to each button.
- WiFi Enable/Disable: The buttons for enabling and disabling WiFi check the current WiFi status and toggle it accordingly, providing feedback via Toast messages.
- Navigation: The "Next" button navigates to the TorchActivity.

7. Calculator

Fig k

2.1.1 1. Introduction

A calculator is a fundamental application that performs arithmetic operations. This project focuses on developing a simple yet functional calculator using Android Studio and Java. The calculator will support basic operations like addition, subtraction, multiplication, and division

Architecture Diagram

The architecture of the project can be divided into two main components:

1. **User Interface:** The front-end part of the application.
2. **Calculator Logic:** The backend logic for performing arithmetic operations.

User Interface

The UI consists of buttons for digits (0-9), arithmetic operations (+, -, *, /), a clear button (C), and an equals button (=).

8. Calling App

1. Introduction

The ability to make phone calls is a fundamental feature in mobile devices. This project focuses on creating a basic calling app using Android Studio with Java, allowing users to dial phone numbers and initiate calls directly from the app.

Flow Diagram

1. User opens the calling app.
2. User enters a phone number.
3. User presses the call button.
4. The app requests call permissions if not already granted.
5. The phone call is connected.

Project Report: Torch App

1. Introduction

This project report outlines the development of a simple Torch app using Android Studio with Java. The app will allow users to turn the device's flashlight on and off, providing a handy tool for illumination.

Flow Diagram

1. User opens the app.
2. User grants necessary permissions.
3. User toggles the flashlight using a button.
4. The system turns the flashlight on or off based on user input.

Camera and Flashlight Control

To control the flashlight, we use the Camera2 API for devices running Android Lollipop (API 21) and above.

10.Wifi

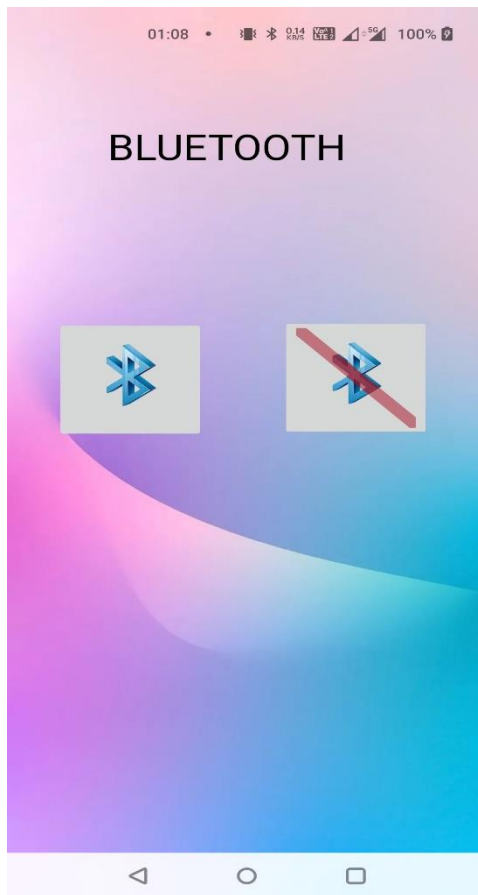

Fig N

Introduction

This project report outlines the development of a WiFi management app using Android Studio with Java. The app will allow users to scan for available WiFi networks, connect to a selected network, and display the connection status

The architecture of the project consists of:

1. **User Interface:** The front-end of the application.
2. **WiFi Management:** Handles scanning and connecting to WiFi networks.
3. **Permissions Handler:** Ensures that the necessary permissions are granted.

Diagram

1. User opens the app.
2. User grants necessary permissions.
3. User initiates a WiFi scan.
4. The system displays a list of available networks.
5. User selects a network and enters credentials.
6. The system connects to the selected network.
7. The user is notified of the connection status.

User Interface

The UI consists of a screen with a button to scan for WiFi networks, a list to display available networks, and input fields for network credentials

Fig R

Introduction

This project report details the development of a Quiz app using Android Studio with Java. The app will allow users to answer multiple-choice questions and receive a score based on their answers. It aims to provide a simple and engaging way for users to test their knowledge on various topics.

Architecture Diagram

The architecture of the project can be divided into three main components:

1. **User Interface:** The front-end part of the application where users interact with the quiz.
2. **Data Management:** Handles storing and retrieving quiz questions and user data.
3. **Logic Layer:** Manages the quiz logic, including scoring and feedback

User Interface

The UI consists of several screens:

- **Main Screen:** Where users can start the quiz.
- **Quiz Screen:** Displays the questions and answer options.
- **Result Screen:** Shows the final score and feedback

Project Report: Web Browser App in Android Studio with Java

Introduction

This project report outlines the development of a simple web browser app using Android Studio with Java. The app allows users to navigate the internet, featuring a user-friendly interface and basic browser functionalities

Architecture Diagram

The architecture of the project consists of:

1. **User Interface:** The front-end of the application.
2. **WebView Component:** Renders web pages within the app.
3. **Permissions Handler:** Ensures that necessary permissions are granted.

Fig Q

Diagram

1. User opens the app.
2. User enters a URL in the address bar.
3. The app loads the webpage using WebView.
4. User navigates the web pages using the provided controls.

User Interface

The UI consists of a single screen with an address bar, a WebView, and navigation buttons.
